Accessories	60
Care instructions	61

Vorbemerkungen

Preliminary remarks

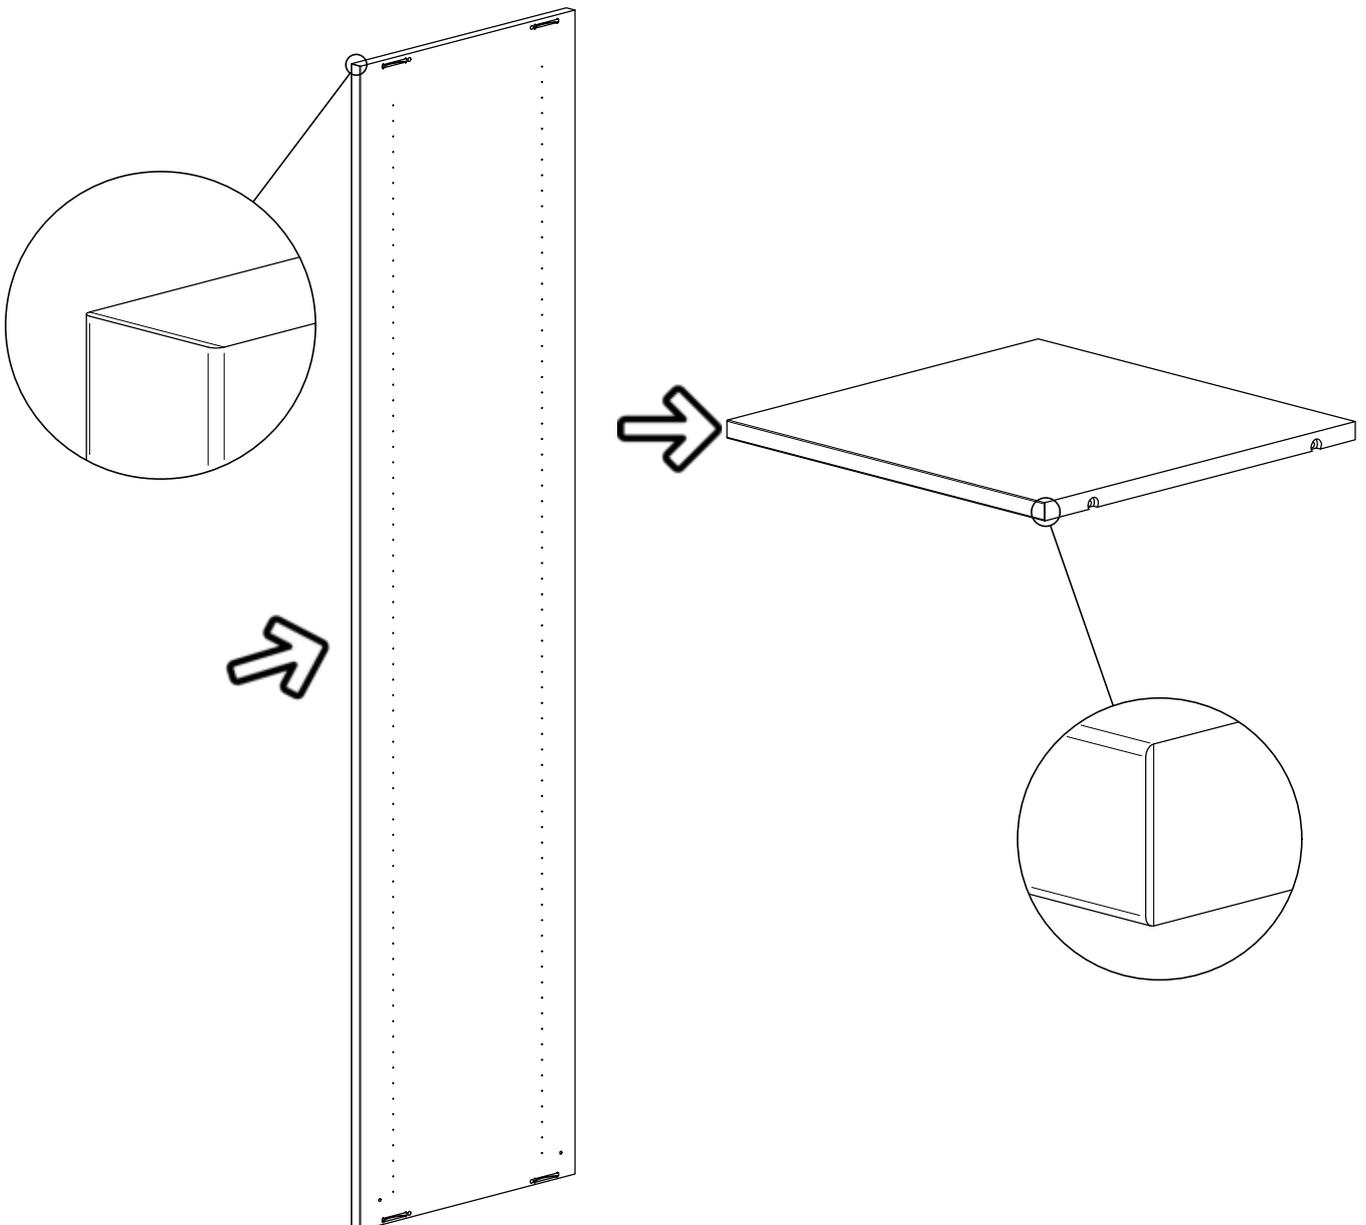

Achtung

Insbesondere bei Regalen ohne Rückwand sind Vorder- und Rückseite der Böden und Korpusseiten schwer voneinander zu unterscheiden. Die Vorderseite ist an der 1,5 mm starken, leicht abgerundeten Kantenbehandlung zu erkennen.

NB

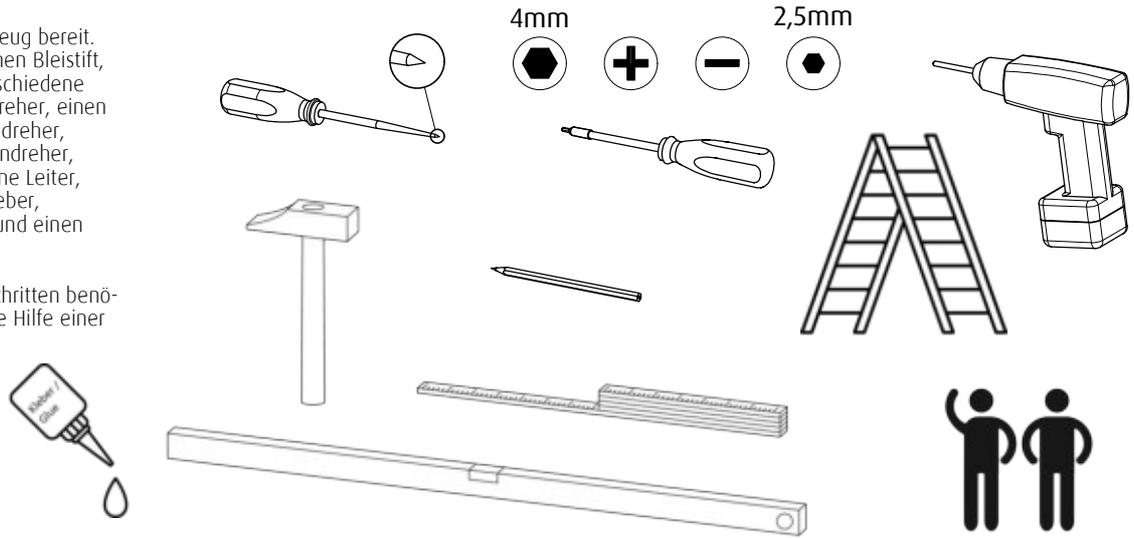

It is particularly difficult to differentiate between the front and back of the shelves and carcass sides of shelving units which do not have a rear wall. The front can be identified by the 1,5-mm thick, slightly rounded edge banding.

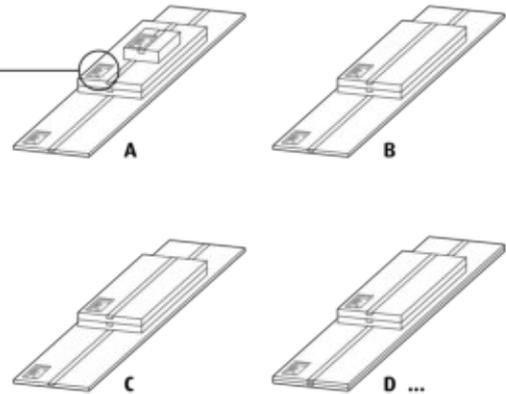

Vorbemerkungen

1 Halten Sie Werkzeug bereit. Sie benötigen einen Bleistift, einen Spitzbohrer, verschiedene Sechskant-Schraubendreher, einen Kreuzschlitz-Schraubendreher, einen Schlitz-Schraubendreher, eine Bohrmaschine, eine Leiter, eine Wasserwaage, Kleber, einen Zollstock (mm) und einen Hammer.

Bei manchen Arbeitsschritten benötigen Sie außerdem die Hilfe einer zweiten Person.

2 Sortieren Sie zunächst alle Pakete nach den Buchstaben auf ihren Etiketten. An den Buchstaben erkennen Sie die Position jedes Bauteils in der Gesamtübersicht. Beachten Sie bitte, dass jede Planung individuell angefertigt wurde und die Bauteile nicht immer genau in der Reihenfolge in dieser Montageanleitung aufgeführt werden, in der sie auch montiert werden. Zu jeder Planung gehört eine Übersichtszeichnung, aus der die Position jedes Bauteils hervorgeht.

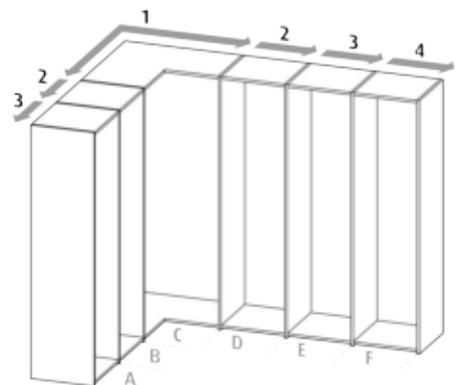

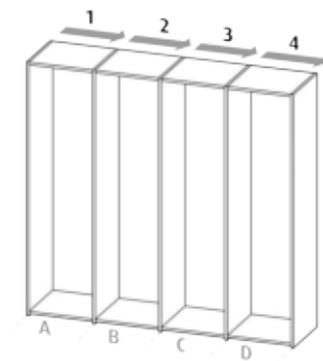

3 Montieren Sie nun die Korpusseiten, Sockel- und Oberböden und, falls vorhanden, die Rückwände. Normalerweise können Sie dabei von links nach rechts vorgehen. Falls Ihr Regal jedoch ein Eck-Element enthält, müssen Sie unbedingt mit diesem beginnen und dann alle weiteren Elemente links und rechts davon ausgehend montieren.

Seiten 10 – 14

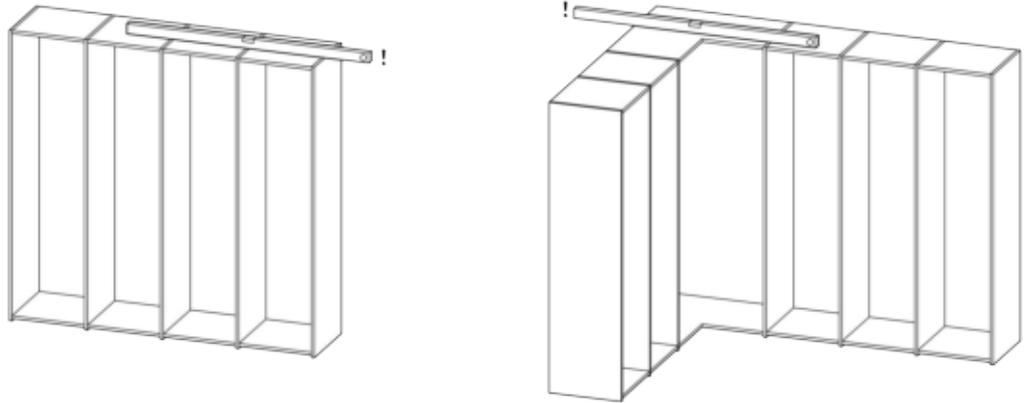

Beachten Sie die Stromleitungen. Wenn das Regal mit Leuchten ausgestattet wird, müssen die Zuleitungen für die Trafos unter den Sockel-Abdeckböden vor der Montage vorbereitet werden.

Seite 9

4 Das Regal / der Schrank muss ausgerichtet werden. Suchen Sie den Punkt, an dem der Fußboden am höchsten ist, von dort ausgehend, müssen die Stellfüße aller Korpusseiten so weit herausgedreht werden, dass das gesamte Regal / der Schrank waagrecht steht.

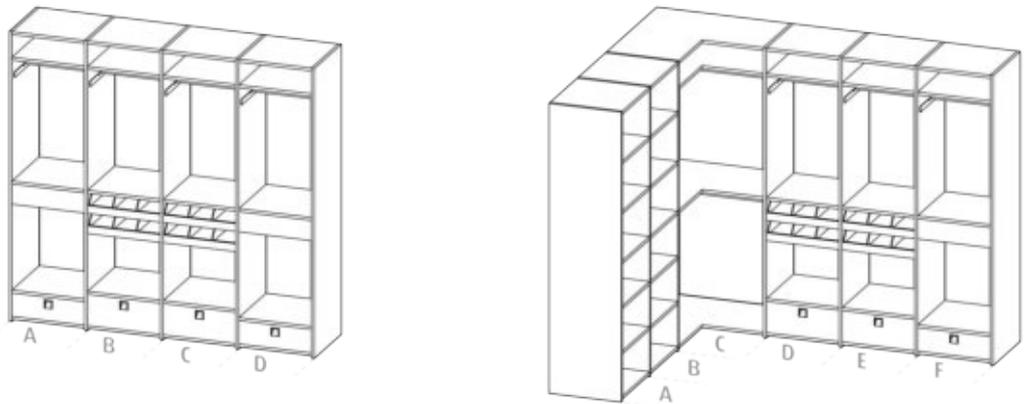

Seiten 15 - 16

5 Jetzt werden die Einbauteile wie Einlegeböden, Schubkästen, Kleiderstangen etc. montiert.

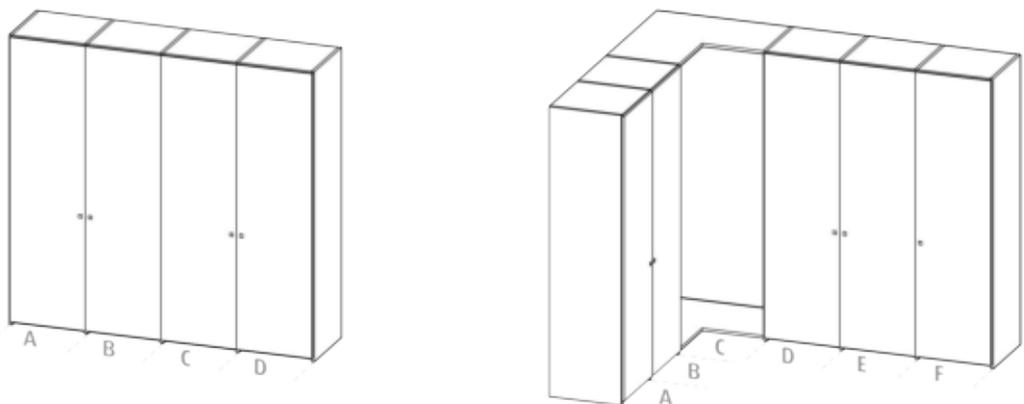

Ausgenommen sind Einbauteile im Bereich der Türbänder. Diese werden nach Einbau und Ausrichten der Türen montiert.

Seiten 17 - 51

6 Erst zum Schluss werden, sofern sie vorhanden sind, alle Drehtüren und Klappen montiert und ausgerichtet.

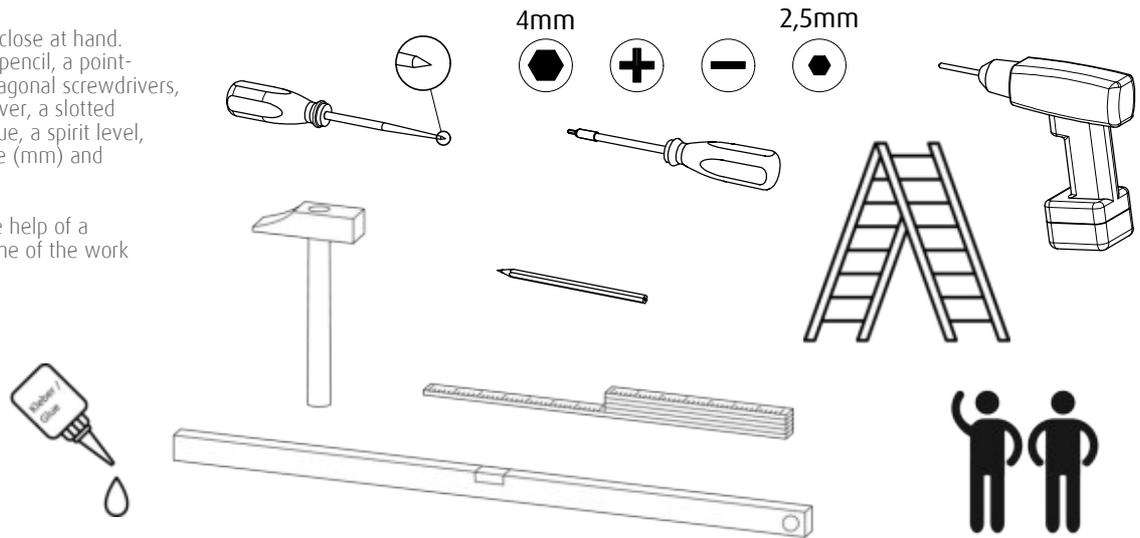

Seiten 52 - 59

Preliminary remarks

1 Keep your tools close at hand. You will need a pencil, a point-bradawl, several hexagonal screwdrivers, a cross-head screwdriver, a slotted screwdriver, a drill, glue, a spirit level, a ladder, a folding rule (mm) and a hammer.

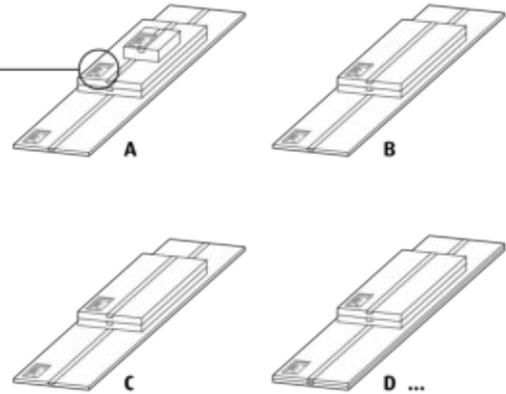

You will also need the help of a second person for some of the work steps.

2 First, sort all the packages by the letters on their labels. The letters show the position of every component in the overall view.

Please note that every plan has been individually customised and that the components are not always listed in the exact order in which they are also mounted in these mounting instructions.

There is an overview drawing for every plan which specifies the position of every component.

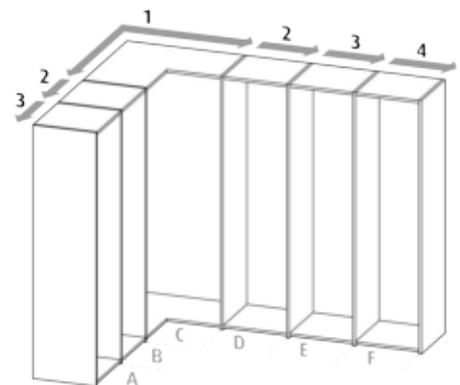

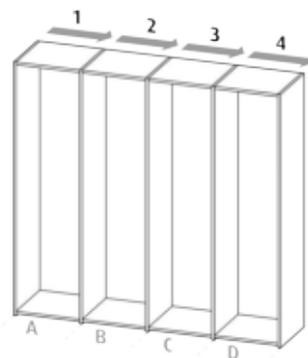

3 Mount the carcass sides, bases and top panels and, where necessary, the rear walls now. Normally, you can proceed from left to right. However, if your shelving unit contains a corner element, you must begin with this and then mount all the other elements outwards, to the left and right of it.

Pages 10 - 14

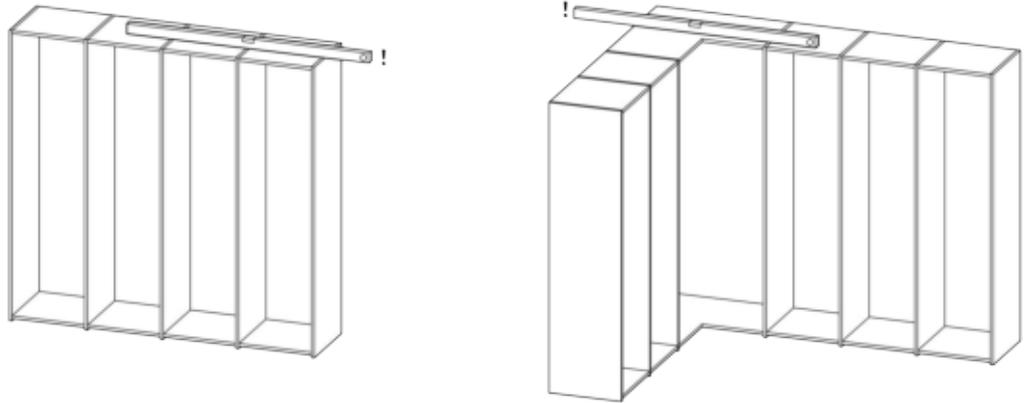

Please take note of the power cables. If the shelving unit is to be fitted with lights, the supply lines for the transformers under the cover panel must be prepared before assembly.

Pages 9

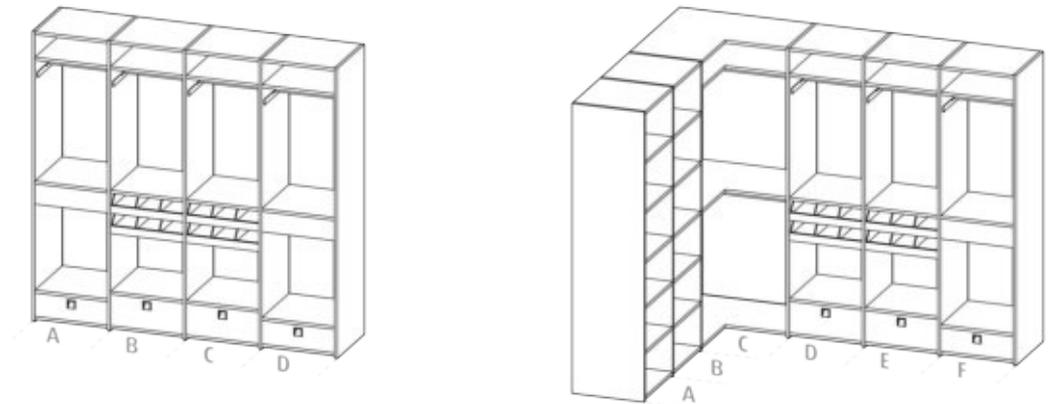

4 The shelving unit / carcass must be positioned. Look for the point where the floor is highest; starting from here, wind out the adjustable feet of all the carcass sides until the entire shelving unit is level.

Pages 15 - 16

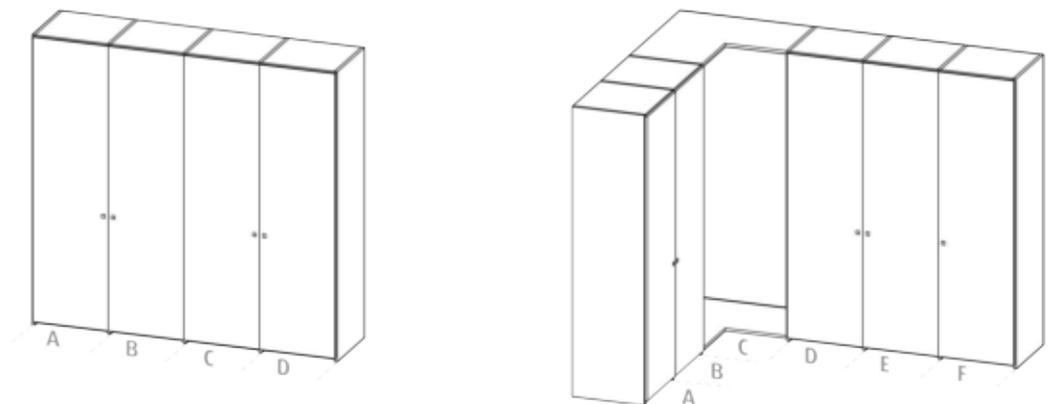

5 Now the built-in parts such as shelves, drawers, clothes rails, etc. are mounted. This does not apply to built-in parts in the area of the door hinges. These are fitted after the doors have been installed and aligned.

Pages 17 - 51

6 At the end, mount and position all swing doors and flaps if they are available.

Pages 52 - 59

Vorbemerkungen

Preliminary remarks

Achtung!
Aus Sicherheitsgründen müssen alle Regalseiten am Mauerwerk befestigt werden!

Den Befestigungswinkel an die entsprechende Stelle halten und die Bohrlöcher wie dargestellt markieren.

Eine 2 mm Bohrung an der markierten Stelle in der Regalseite und eine 8 mm Bohrung an der markierten Stelle in der Rückwand (sofern vorhanden) setzen. Dazu passend eine 8 mm Bohrung im Mauerwerk setzen und mit einem geeigneten Dübel versehen.

Den Winkel wie gezeigt zunächst an der Regalseite und dann durch die Rückwand (sofern vorhanden) im Mauerwerk festschrauben.

Die Abdeckkappe auf den Befestigungswinkel drücken.

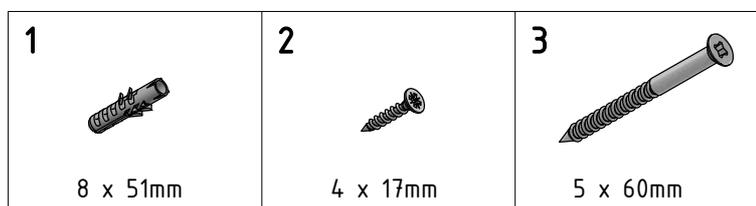

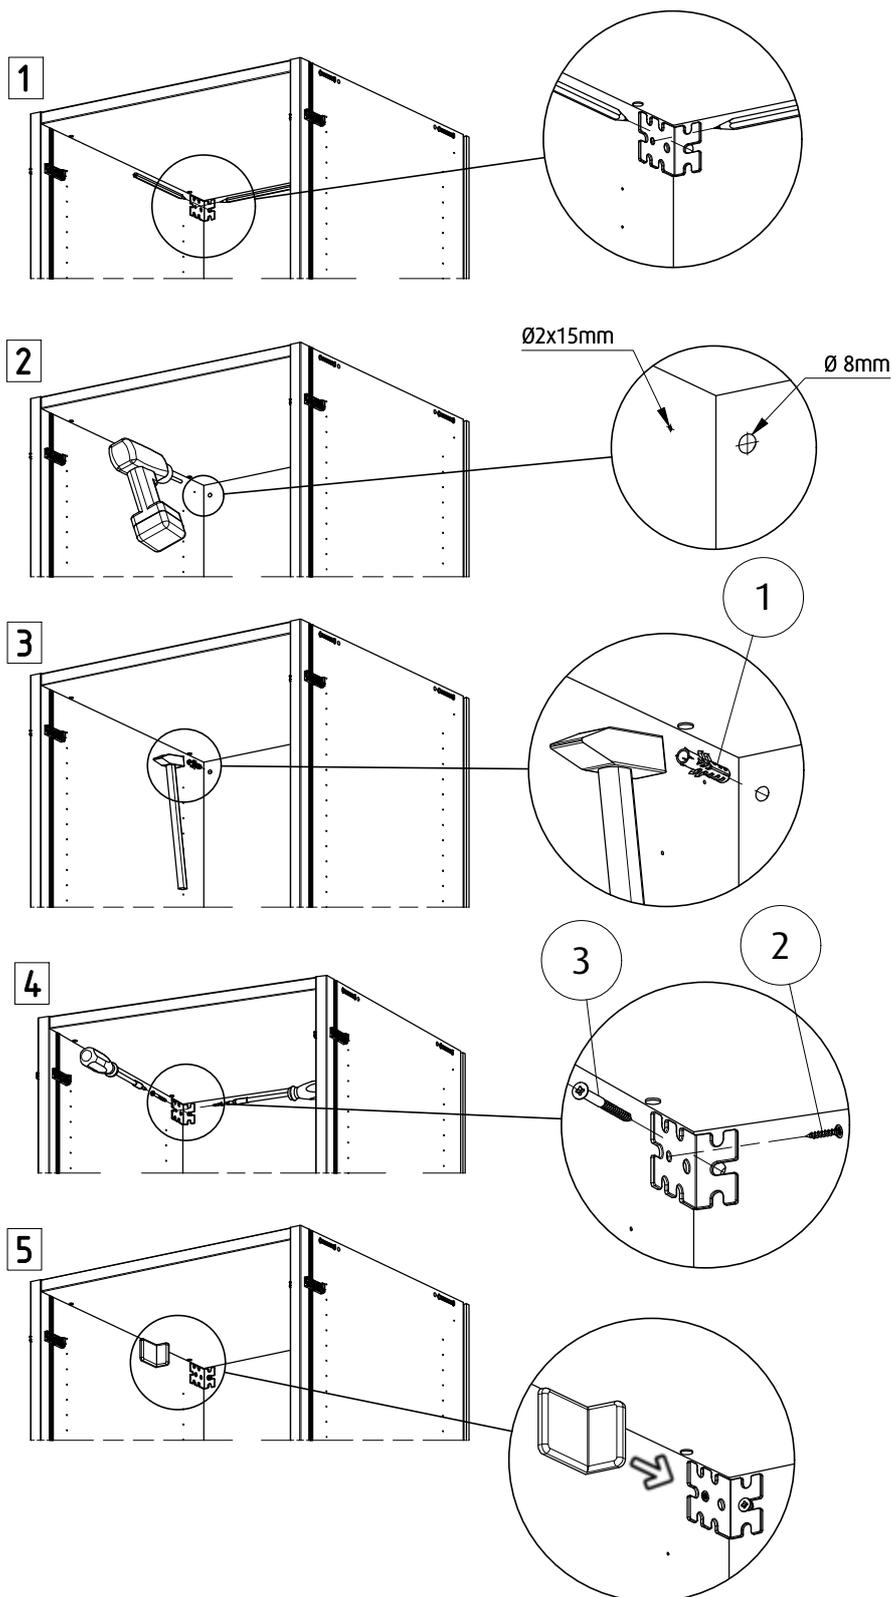

Please note!
For safety reasons, all sides of the shelving unit must be fixed to the wall!

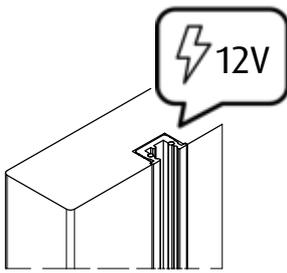

Hold the mounting bracket in the corresponding position and mark the drill holes as shown.

Drill a 2-mm hole in the marked location in the side of the shelving unit and an 8-mm hole in the marked location in the rear wall of the shelving unit (if available). Drill a matching 8-mm hole in the wall behind the shelving unit and insert a suitable dowel.

Screw the mounting bracket onto the side of the shelving unit as shown and then through the rear wall of the shelving unit (if available) onto the wall behind it.

Press the cover cap onto the mounting bracket.

DEUTSCH

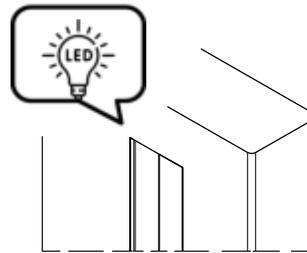

Optionale Stromschiene

Falls die Korpusseite eine Stromschiene hat, muss sie vor der Montage des Sockelbodens mit der Zuleitung verbunden werden! Die Zuleitung muss dann nach unten herausgeführt und später mit dem Trafo verbunden werden.

ENGLISH

Optional power rail

If the carcass side has a power rail, it must be connected with the inlet pipe before mounting the plinth base! The inlet pipe must be fed downwards and later connected with the transformer.

DEUTSCH

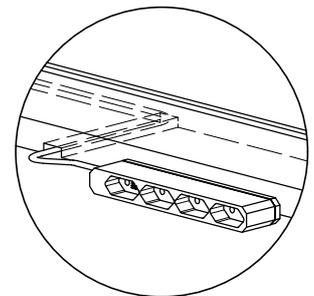

Optionale Seitenbeleuchtung

Bei der Seitenbeleuchtung muss die vormontierte Zuleitung nach unten herausgeführt und später mit dem Trafo verbunden werden.

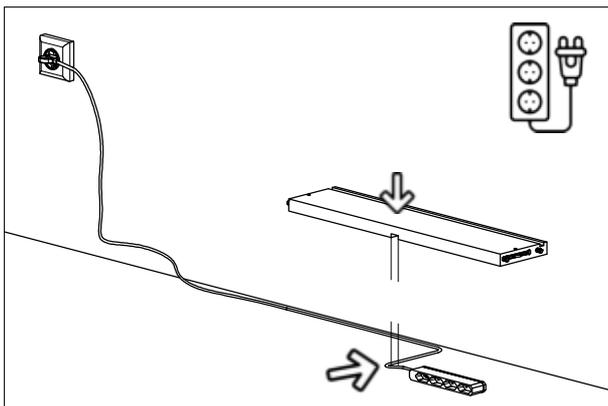

ENGLISH

Optional carcass side lighting

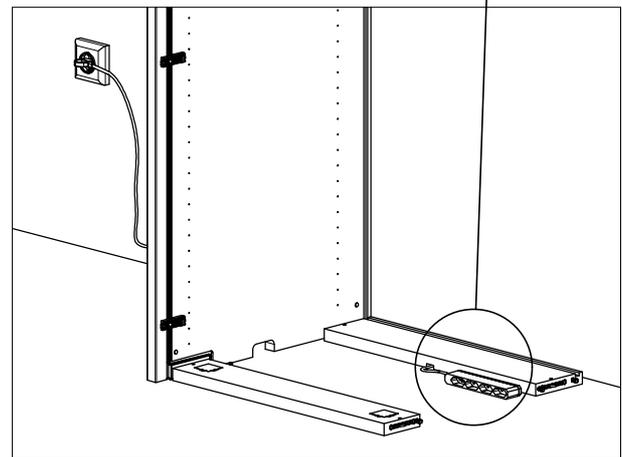

If there is carcass side lighting, the pre-mounted inlet pipe must be fed downwards and later connected with the transformer.

Achtung

Beachten Sie bei jedem Bauteil jeweils die gesonderte Montageanleitung in der entsprechenden Verpackung.

NB:

Please note the separate mounting instructions in the corresponding packaging for every component.

Melaminoberflächen sollten mit Wasser und Seife oder anderen wasserlöslichen Reinigungsmitteln gereinigt werden. Scheuermittel dürfen nicht angewendet werden.

Lacke sind pflegeleicht und können zur Reinigung mit einem leicht feuchten, lederartigen Tuch abgewischt und anschließend getrocknet werden. Keine nassen Tücher verwenden! Scheuermittel dürfen nicht angewendet werden.

Echtholz furniere mit einem leicht feuchten, lederartigen Tuch abwischen und anschließend trockenreiben. Keine nassen Tücher verwenden! Scheuermittel dürfen nicht angewendet werden.

Glas. Fettrückstände, Fingerabdrücke etc. können mit einem fusselfreien Tuch (Mikrofaser-Tuch), Schwamm oder Leder und lauwarmen Seifenlauge großflächig abgewaschen und gespült werden. Die Glaselemente danach mit einem Ledertuch ganzflächig trockenreiben. Bei der Reinigung direkte Sonneneinstrahlung vermeiden, da sich sonst Kalkablagerungen (Wasserflecken) einbrennen können. Niemals Haushaltsreiniger mit scharfen oder ätzenden Wirkstoffen verwenden.

Melamine surfaces should be cleaned with soap and water, or other water-soluble cleaning materials. Scouring agents must not be used.

Lacquers are easy to clean; they can be wiped clean with a damp, leather-like cloth and then dried. Do not use wet cloths! Scouring agents must not be used.

Wipe down **real wood veneers** with a lightly moistened leather-like cloth and then rub them dry. Do not use wet cloths! Scouring agents must not be used.

Glass. Fatty residue, fingerprints, etc. can be washed away and rinsed extensively with a lintfree cloth (microfibre cloth), sponge or leather and lukewarm soapy water. Then rub any glass elements dry with a leather cloth afterwards. Avoid direct sunlight during cleaning, otherwise calcium deposits (water marks) may burn into the surface. Never use household cleaners that contain aggressive or corrosive substances.
